

ECCO-410

The Ecco 410 applicator (3D gun) has been in successful operation in automotive installations globally since 2004. Many options exist and unique features have been developed in close co-operation with our customers. Hence, we today have a very versatile range of applicators for viscous material used in seam sealing, sound dampening and cosmetic sealing.

The main advantage of Ecco 410 is its market leading low weight of only 3.7 kg for the aluminium version. This benefit grant the usage of smaller and more cost effective robots.

Other features of the Ecco 410 applicator:

- One or two materials can be applied by the same unit
- Optional material circulation
- Integrated heating sensors
- Integrated temperature sensors
- Integrated pressure sensors
- Integrated needle sensors
- Nozzle heads with a wide range of nozzle and slot angles
- Aluminium or stainless steel versions (for water based material)
- Several options for mounting flanges
- Wide range of connection cables
- Very low applicator weight (3.7 kg in aluminum and 5.7 kg for stainless steel)
- Suitable for robots in 5-20 kg range
