

ECCO 320A

Ecco 320A is an automatic spray gun with air-operated remote control. The needle valve is opened by an air-operated piston and closed by a powerful coil spring. All components in contact with the paint are made in stainless steel. Valve seat and needle tip are made in tungsten carbide for long durability. The gun is prepared for paint circulation when hot spraying. Ecco 320A can also be used as a qualified fluid valve, for example in colour changing systems and other applications demanding short reaction time and durability.

TECHNICAL DATA

| | |
|---|-------------------|
| Max paint pressure | 360 bar |
| Min / max air pressure | 6/8 bar |
| Connection for spray tip retaining ring | M 18 x 1 |
| Paint connection | 1/4" 18 NPSM male |
| Net weight | 545 g |
