

ECCO 81V

Ecco 81V is an automatic spray gun, especially designed for spraying objects inside confined areas. The control valve for opening/closing, as well as all connectors, are placed externally. The air cap is the only part that will be inside the spraying area during production.

Features:

- ▶ Fluid circulation all the way through the valve and the gun body and very few moving parts. A sealing ring behind the air cap will prevent any leakage of spray mist or liquid.
- ▶ This gun has separate connectors for atomizing air and shaping air. In addition, external air regulators control the spray pattern and there are separate valves for opening/closing of the fluid.
- ▶ The gun extremely quick and easy to replace and/or repair.
